TO: Warren Zehner, EPA; Pete Maggiore, & George Rael, DOE, NNSA; Arthur Trujillo, LANL

Gentlemen:

The DOE RAP team air sample monitoring results for nine location reporting Cesium 137 have been review and are all less than the applicable state regulation (i.e. 20.3.4 NMAC, ALI, DAC, and Air concentrations effluents) for Cesium 137. I would like to know if the units Pico-curie/meter cube (pCi/m³) are agreeable with all of you. I spoke with Matthew Loesel, EPA and he agreed that the units EPA will use for air samples will be pCi/m³. Please let me know as soon as possible we would like to post the results on NMED site as soon as we hear from you all. Thank you for your help.

Sincerely,

Michael Ortiz, Chief
Radiation Control Bureau
NMED/EPD
